

## Goldsmiths' Island Inhorgenta 2025

The self-sufficient goldsmith island can be flexibly positioned in the middle of the room. The invisible technical area, in which gas and CO2 cylinders can be integrated, is located in the middle section. The compressor and the multi-user extraction system are also housed there.

The island can be extended modularly - any number of workstations can be inserted in the middle. It can be individually adapted to the local conditions. The space required for the island is significantly less than for individual workstations.

The lighting is integrated into the workbench superstructure and a movable microscope is suspended from it.

### Product information

<b>Product category</b>	Multiple table systems
-------------------------	------------------------

### Features

<b>Table frame</b>	Classic two-sided stand
<b>Width</b>	Special size
<b>Depth</b>	Special size
<b>Height adjustment</b>	without
